
MUKESH KANNA

SOFTWARE TEST ENGINEER

Chennai India ♦ 8056375649 ♦ mukeshkanna2305.mk@gmail.com

PROFESSIONAL SUMMARY

Enthusiastic, highly responsible and positive team player with excellent analytical skills, strong knowledge of software testing and effective listener/communicator with developers and the business team to help with test planning, identifying risks, requirements design

SKILLS

Java	Selenium WebDriver
TestNG	JUnit
Cucumber	POM – Page Object Model
Data Driven Framework	Postman
Rest Assured	JIRA
Agile	Manual Testing
Git & Github	SQL query(Basic)
Appium	Appium Inspector
Jenkins(CI/CD)	Maven

WORK HISTORY

Associate Senior Software Engineer, 07/2022 - Current

Mphasis – Chennai, India

Project: Etsy

Description: Etsy is a global e-commerce platform enabling sellers to showcase handmade and vintage products. The project aimed to automate **web, API, and mobile testing** for Etsy's core modules such as user registration, product search, cart management, checkout, and payment integration

Roles and Responsibilities:

- Designed and implemented **automation scripts** using Selenium WebDriver with TestNG, Cucumber with JUnit for critical workflows (search, add to cart, checkout, payment).
- Built **Page Object Model (POM)** framework integrated with **Maven** for scalability.
- Executed automated regression suites in **CI/CD pipeline** using Jenkins.

- Maintained reusable functions and reduced execution time by **optimizing test cases**.
- Validated Etsy's backend APIs for **login, product listing, and order management** using **Postman and RestAssured**.
- Performed **functional, negative, and boundary testing** of APIs with JSON payloads.
- Verified **response codes, headers, schema validation, and DB consistency** with MySQL queries.
- Integrated API test scripts into automation framework for end-to-end coverage.
- Executed **manual and automated mobile tests** on Android/iOS using Appium.
- Verified UI responsiveness, navigation, and **core flows (login, search, purchase)**.
- Prepared **test plans, scenarios, and RTM (Requirement Traceability Matrix)**.
- Participated in **Agile Scrum ceremonies** (sprint planning, daily stand-ups, retrospectives).
- Reported and tracked defects in **JIRA**, ensuring timely resolution.

Associate Software Engineer, 12/2021 - 07/2022

Torry Harris Business Solution

- Develop comprehensive test plans and test cases based on project requirements, user stories, and acceptance criteria.
- Execute manual test cases systematically, ensuring thorough coverage of functional and nonfunctional requirements.
- Perform regression testing to validate software changes and ensure that existing functionality remains intact.
- Conduct exploratory testing to identify defects, usability issues, and edge cases that may not be covered by predefined test cases.
- Document test results, defects, and test coverage accurately using test management tools as JIRA.
- Collaborate with cross-functional teams including developers, business analysts, and product owners to clarify requirements and resolve issues.
- Participate in requirement analysis and review sessions to ensure testability, completeness, and clarity of project requirements.
- Verify resolved defects and enhancements to ensure proper resolution and prevent regression.
- Communicate effectively with team members, providing regular status updates and highlighting any risks or issue.

Junior QA Analyst, 03/2021 - 11/2021

Wipro Technologies – Chennai, India

Project: AXA Germany

Domain: Insurance

Description: The Customer is involved with providing P&C insurance for the policyholder's property. The Project work involves functional testing of various insurance products and their ratings. At times validated the product via shadow process by modulating request XML. Also involved in creating various transactions of the policies such as New Business, Midterm adjustments, Cancellations, Renewals, rewriting and

Reinstating. Through the policy created through the Policy center, claims are created using the Claim Center application.

Roles and Responsibilities:

- Reviewed and analyzed business requirements and created detailed test cases for flight booking, cancellation, and modification modules.
- Executed functional, smoke, and exploratory testing across multiple platforms.
- Logged defects in Jira and coordinated with developers to ensure timely resolution and retesting.
- Performed end-to-end testing of critical user flows, including login, seat selection, meal preferences, and payment gateway.
- Tested UI responsiveness and compatibility on multiple browsers and devices.
- Prepared test data for negative and boundary value testing scenarios.
- Participated in UAT sessions with business stakeholders and gathered feedback for improvement.

EDUCATION

B.E.: Computer Science, 2017

Karpagam University - Coimbatore, India
