

PROFESSIONAL OBJECTIVE:

Java Developer and Software Engineer with **6.5 years of experience** in software development and **L3 technical support**, with strong expertise in **debugging complex code flows, identifying root causes, and providing optimized solutions**. Proficient in **Java, Spring Boot** and **client-specific application configuration**. Have hands-on experience with **basic queries in MySQL and IBM DB2** based on client-specific needs. Skilled at **resolving critical production issues, customizing database queries, and delivering client-centric solutions** with long-term impact.

WORK EXPERIENCE:

- **Worked in RAVSoft Solutions India Private Limited as Software Engineering Level 1 from June 18th, 2018 - January 13th, 2025.**
 - Analysed and debugged application code to identify and fix bugs across multiple healthcare modules.
 - Delivered quick turnaround solutions for emergency issues and patch deployments.
 - Customized application configurations and created optimized queries based on client-specific needs.
 - Collaborated directly with clients to gather requirements, clarify expectations, and provide tailored solutions.
 - Participated in root cause analysis, unit testing, integration testing, and emergency code rollouts.
- **Worked in BRTECH as trainee staff from July 2016 to May 2018.**
 - Supported software development tasks and gained hands-on experience in Java-based technologies.
- **Worked in Express delivery as Delivery staff from June 2014 to Oct 2016.**
 - Managed delivery operations, ensuring timely dispatch and customer coordination.
- **Worked in Info Network Management Pvt Ltd as Junior Executive in Data Entry, Management & Analysis from April 2013 to May 2014.**
 - Worked on data entry, management, and analysis for internal process improvements.

SKILLS:

Languages & Technologies: Java, Spring Boot.

Databases: Basic queries on MySQL and IBM DB2.

Healthcare Sys Integration: DICOM(Hands on Experience) HL7(Working Knowledge).

PROJECT DETAILS:**PROJECT : Radiology PACS**

Radiology PACS is a client server application which is used by radiologist/technologist/doctors in the hospitals. It is uniquely designed to handle high-enterprise imaging volumes, perform in diverse reading environments, and enhance the efficiency of healthcare delivery.

Responsibilities

- Assigning task based on priority of the issue.
- Root cause analysis and feature development.
- Providing solution/workaround to client site.
- Do code changes and provide patch.
- Unit Testing and Integration Testing. Code review and emergency fix.

Environment: DICOM, HL7, Java, C++, Spring MVC, Swing and DB2.

PROJECT : DrView (Hospital Management System)

HMS is mainly designed for registering and tracking the flow of all patients from appointment to final billing. HMS deals with Patient history maintenance, analytical report show, Rx generation and print prescription. HMS consists of following modules. Masters, treatment, Prescription, transaction and Reports of patient and doctor treatment related activities.

Responsibilities

- Assigning task based on priority of the issue.
- Root cause analysis. Feature development.
- Providing solution/workaround for site.
- Do code changes and provide patch.
- Unit Testing and Integration Testing. Code review and emergency fix.

Environment: Java, Spring MVC, Hibernate, JavaScript, Mysql, Tomcat 6.0.

EDUCATION : Bachelor of Engineering (Computer Science & Engineering) Jayaram College of Engineering and Technology, Trichy.
