Ekkatuthangal, Chennai, Tamil Nadu 600032

FULL STACK JAVA DEVELOPER

Dedicated and results-driven IT professional with 4.6 years of experience seeking a challenging IT role to contribute technical expertise, problem-solving abilities, and a strong commitment to delivering exceptional IT solutions. Professional Experience:

STRENGTHS AND EXPERTISE

P&L Management	Financial Reporting	Team Leadership
Business Development	Negotiation Skills	Communication
Strategic Planning	Client Relationship Management	Operations Management

PROFESSIONAL EXPERIENCE

Paragon Dynamics Info Systems PVT LTD

Apr 2021 - Feb 2025

Team Leader - Senior Software Engineer

Project 1 : Global Feeder Shipping and SAFEEN FEEDERS SHIPPING.,

These projects focuses on managing operations and finances for feeder vessels that connect mainline shipping routes to smaller ports. It ensures seamless container movement while optimizing operational efficiency. Costing Aspect: The costing module in GFS covers: Charter Hire Costs: Calculating vessel rental based on voyage duration. Fuel Costs: Monitoring bunker consumption and rates. Port Charges: Accounting for berth, tug, pilotage, and other port-related fees. Container Handling Costs: Tracking loading, unloading, and transshipment expenses. Overheads: Allocating administrative and operational costs. This comprehensive costing system enables precise financial reporting, accurate invoicing, and profitability analysis, supporting informed decision-making in global shipping operations.

Technology : HTML/CSS, Angular TS 19, JAVA 17 Spring Boot, Design Patterns, J2EE, Rest Web Service, Apache Struts & PostgreSQL.

Description: These are leading feeder and short-sea service providers, specializing in container shipping and maritime logistics. These companies facilitate cargo movement across major ports, ensuring efficient transshipment, slot operations, and cost-effective shipping solutions.

Roles and Responsibilities: 1) Invoice & Billing System Development 2) Costing & Financial Management 3) GST & Taxation Handling 4) Transshipment (T/S) & THC Cost Management 5) Revenue & Financial Reporting 6) Exchange Rate & Multi-Currency Handling 7) Backend & Database Development 8) Bug Fixes & System Enhancements 9) Deployment & Integration 10) Support & Issue Resolution

Users can create a ticket if they have an issue or want to implement Outlook mail, and I will respond accordingly. The aforementioned projects are development projects. I have coded backend services using Angular TS, HTML/CSS, Spring Boot Java (Java 8) and the PostgreSQL 9.8 database.

Project 2 : Sima Marine India PVT LTD and Interworld Shipping (IWS).,

These projects manages shipping operations and logistics for containerized cargo across domestic and international routes. It emphasizes efficient scheduling, cargo handling, and financial optimization. Costing Aspect: The costing module focuses on: Voyage Costs: Including bunker fuel, port charges, and crew expenses. Container Handling Costs: Tracking expenses for loading, unloading, and repositioning. Operational Costs: Covering vessel maintenance, charter hire, and route-specific charges. Third-Party Charges: Managing costs for external services like transshipment and inland transportation. Revenue vs. Expense Analysis: Ensuring profitability by comparing revenue earned from cargo with operational costs. This system supports detailed financial tracking and helps streamline operations for optimal cost efficiency.

Technology : JSP, Angular JS 1, JAVA 8 Spring MVC, Rest Web Service, Apache Struts, MicroServices, JUnit, Hibernate & MySQL.

Description : These are global shipping and logistics providers specializing in containerized cargo transportation, feeder services, and vessel operations. These companies play a crucial role in port-to-port connectivity, transshipment, freight forwarding, and cost-optimized shipping solutions across international trade routes.

Roles and Responsibilities: 1) Financial & Cost Management 2) Invoice Automation & Revenue Management 3) Port Tariff & Agency Fee Handling 4) Cost Accruals & Reporting 5) Backend Development & System Enhancements 6) Bug Fixes & Process Optimization 7) Deployment & System Maintenance 8) Outlook Integration & User Support

Nasdaq Corporate Solutions India Private Limited

Mar 2025 - Sep 2025

Team Leader - Senior Software Engineer

Project 1 : CATT UI (Computer Aided Test Tool)

CATT UI (Computer Aided Testing Tool) is a frontend interface built for a Calypso-based application that focuses on automating and managing test executions within financial systems. The application is designed to simplify the creation, configuration, and monitoring of test cases, test jobs, and test results for Calypso modules, enabling faster and more accurate testing workflows.

Technology : HTML, Angular TS 19, Git / Bitbucket, Postman, JIRA

Roles and Responsibilities: 1) Frontend Development 2) API Integration 3) Performance & Optimization: 4) Testing & Debugging: 5) Collaboration

EDUCATION

SSLC - completed SSLC with 75% - 2013 - 2014 (Ramanathan Chettiar Higher Secondary School)

HSC - completed HSC with 75% - 2015 - 2016 (Ramanathan Chettiar Higher Secondary School)

Diploma in computer science - 94.75% - 2016 - 2018 (Subramanian Polytechnic College)

BE- completed BE with 7.4 - (Alagappa Chettiar Government College of Engineering & Technology)

PERSONAL DETAILS

- Name : MEENAKSHI SUNDARAM G
- Mother Name : SHANTHI G
- Location (NATIVE) : PUDUKKOTTAI
- Phone Number : 9047175358

Father Name : GANESAN RM

Marital Status : SINGLE

Date of Birth : 05/05/1999

LANGUAGE

- Tamil - Read, Write, Speak - Proficient

English - Read, Write, Speak - Proficient

PRODUCTION ISSUES HANDLED & RESOLUTIONS

Issue: Application crash due to unhandled runtime exceptions in Angular components

Fix: Implemented global error handling using ErrorHandler class and added proper try-catch blocks in service calls to gracefully handle API failures.

Issue: Broken layout/UI inconsistencies in production despite working in development

Fix: Identified mismatched CSS loading due to AOT (Ahead-of-Time) compilation differences and used ng build --prod locally for testing before deployment.

Issue: Angular routes not loading properly when directly accessed via URL (404 error)

Fix: Configured server-side fallback using index.html for SPA support in nginx or Apache.

Issue: API failures due to CORS errors after moving to production

Fix: Worked with backend team to configure proper CORS headers and tested endpoints through Postman and Angular HTTP calls.

Issue: Large bundle size causing slow initial load

Fix: Used Angular Lazy Loading, optimized images, removed unused modules, and enabled production build optimizations (--prod, --build-optimizer, --aot).

Issue: Unresponsive Angular application after deployment due to environment misconfiguration

Fix: Ensured correct environment.prod.ts variables were used in deployment and environment-specific build commands (ng build --configuration=production) were followed.

Issue: Angular CLI commands not working due to PowerShell script restrictions

Fix: Modified execution policy using Set-ExecutionPolicy RemoteSigned with admin rights and ensured Angular CLI path is added to system environment variables.

Issue: API performance degradation due to inefficient SQL queries

Fix: Used @Query with proper indexing and query tuning; analyzed slow queries using EXPLAIN plans and optimized them.

Issue: Memory leaks or high memory usage under load

Fix: Performed heap dump analysis, optimized caching with @Cacheable, and removed unnecessary object creation in services.

Issue: Unstable deployments due to missing environment variables or wrong configurations

Fix: Used @ConfigurationProperties with profile-based .yml files, and validated required properties using @Validated.

Issue: Long application startup time in production

Fix: Delayed non-critical bean initialization, optimized the number of loaded dependencies, and switched to lighter logging configuration for production.
