SUMMARY

Performance Test Engineer with 4 years of experience in planning, designing, and executing performance, load, and stress tests for large-scale web and cloud applications. Adept at identifying performance bottlenecks, optimizing resource utilization, and ensuring high availability and scalability of systems.

WORK EXPERIENCE

Intellect Designs Arena

11/2021 - Present

System Engineer

- Designed, executed, and maintained over 50 performance and load test scripts using JMeter and BlazeMeter for web and API applications, simulating more than 1000 concurrent users and real-world usage patterns based on Google Analytics.
- Collaborated with developers and DBAs to optimize SQL queries and backend performance, using AWS CloudWatch for real-time monitoring, bottleneck identification, and system health analysis.
- Achieved a 35% reduction in API response times, enhanced system scalability to handle 2 times peak transactions, and prepared detailed test reports with actionable optimization recommendations.

EDUCATION

Sree Sastha Institute of Engineering & Technology College

2016 - 2020

B.E- Automobile Engineering – 7.1

Excel Higher Secondary School

2015 - 2016

HSC - 70%

Excel Matriculation Higher Secondary School

2014 - 2015

SSLC - 92%

SKILLS

- **Performance Tools:** Apache JMeter, BlazeMeter
- **Monitoring & Analytics:** AWS CloudWatch,
- **Cloud Technologies:** AWS (EC2, S3, CloudWatch)
- **Data & Database:** MySQL (basic SQL queries)
- **Scripting & Languages:** Core Java, groovy and BeanShell scripting
- **Performance KPIs:** Response Time, Throughput, DB Latency, CPU/Memory Utilization
- **Testing Types:** Load, Stress, Spike, Endurance, Scalability Testing
- **Methodologies:** Agile
- **Project Management Tool:** Jira

PROJECTS

SJP-Wealth Management (New Business)

Conducted performance and scalability testing for a wealth management application, focusing on form submission and report generation modules across multiple product lines.

Duration: 6 months

Key Responsibilities:

- Designed and executed 15+ performance test scripts using Apache JMeter and BlazeMeter for web and API modules.
- Monitored system performance and health during test execution using Anypoint and AWS CloudWatch.
- Prepared detailed reports and dashboards summarizing throughput, response times, and server utilization metrics.

SJP-Wealth Management (Salesforce & Advice Assistant)

Configured and customized Salesforce Sales and Service Cloud modules by developing workflows, automations, and validation rules, and integrating Salesforce with external systems. Collaborated with cross-functional teams to gather requirements, design scalable solutions, and enhance user experience through optimized dashboards and reports.

Duration: 6 months

Key Responsibilities:

- Designed, developed, and executed 10+ load and scalability tests for web and API-based applications.
- Resolved complex scripting and correlation challenges caused by large payloads in the Advice Assistant application by performing manual correlation and parameterization in Notepad and integrating them into JMeter for successful execution.
- Monitored application servers, databases, and network performance during tests to identify bottlenecks and optimize system behavior.
- Conducted baseline testing to establish performance benchmarks for future comparison and improvement.

Purple fabric AI & System holding

Designed and implemented logical performance test scripts for the AI platform using JMeter.

Duration: 6 months

Key Responsibilities:

- Designed and executed complex, logic-driven JMeter scripts using advanced correlation techniques to reduce response times and ensure consistent performance results, performing manual verifications to validate request–response integrity.

SJP-My practice

Conducted load, endurance, and scalability testing to validate system performance and stability. Analyzed test results and performance reports to identify bottlenecks and optimization areas. Collaborated with the DevOps team on query tuning and reindexing to ensure response times met defined SLA targets. **Duration:** 2 years-present

Key Responsibilities:

- Designed and executed 20+ performance test scripts using Apache JMeter and BlazeMeter for multiple integrated applications.
- Utilized Controllers, Timers, and BeanShell scripting to implement dynamic logic and simulate real-user behavior.
- Worked on Graph URL analysis to monitor response patterns and identify performance bottlenecks.
- Handled merged application workflows, ensuring smooth script transitions between interconnected systems once execution in one application completed and redirected to the next.

LANGUAGE

English, Hindi, & Tamil

AWARD

Spot Award for Mypractice Application @intellect Ai

CERTIFICATE

Certifications

- **JMeter Intro:** Certificate of Completion for the foundational course in performance testing using Apache JMeter.
- **JMeter Pro:** Advanced-level certification awarded upon completing the next stage after the Intro course.
- **Qspider –** Java Basics , SQL , Manual & Automation testing Course.
