

Sharmila NKS

Software Test Engineer

+91 8778351584

sharmilanks3105@gmail.com

EDUCATION

- Completed **Bsc Computer Science** in VLB
Janakiammal College of Arts and Science (2016)

SKILLS

AUTOMATION

- Selenium Webdriver

LANGUAGE

- Java
- JavaScript

FRAMEWORKS

- Testng,
- Cucumber,POM,
DataDriven,Junit

BUG TRACKING

- Jira

DATABASE

- Oracle

SOURCE CODE

- Github

PROFESSIONAL SUMMARY

- 8 years** of experience in IT as a Test Engineer in building enterprise-level software for multiple business units with **Automation Testing** and **Manual Testing**.
- Skilled in understanding the requirements and deriving Manual test cases & Automation test scripts
- Expertise in developing frameworks in Design Pattern (Page object model) using **Cucumber**, **TestNG**, **Junit**, and **Data-driven**
- Proficiency in scripting test cases using Java (OOPS concept)
- Experience with various testing techniques, such as **functional testing**, performance testing, **regression testing**, and user acceptance testing.
- Knowledge of test automation frameworks and tools, such as **Selenium**, **POM**, **Data-Driven**, **JUnit**, **TestNG** and **Cucumber**
- Having Knowledge in Selenium with Java, Excellent understanding of SDLC Models & Agile Methodology
- Strong understanding of different software development methodologies, like Agile and the ability to adapt testing strategies accordingly.
- Well-versed with XPath, CSS, Document Object Model (DOM), and XML.
- Strong knowledge in using **HTTP Methods** like GET, PUT, POST, and DELETE.
- Experience in **API testing** using **Postman** and **Rest Assured**
- Knowledge of the Continuous integration tool Jenkins.

EXPERIENCE

- Worked as a **Senior Test Engineer** at Tata Consultancy Services (TCS), Chennai from **Feb 2018 to Oct 2025**
- Worked as a **Quality Analyst** NTT Data Global Services, Chennai from **April 2017 to Feb 2018**

PROJECT

Company: Tata Consultancy Service - Feb 2018 to Oct 2025

Project 1:

Project Title: Bank of America – Online Banking Application (Nov 2021 – oct 2025)

Domain: Banking

Role: Automation Test Engineer

Tools & Technologies: Selenium WebDriver, Cucumber

Project Description:

Bank of America's Online Banking Application is a secure, web-based platform designed to provide customers with digital access to core banking services such as account management, fund transfers, loan processing, bill payments, and transaction history. The system ensures seamless user experience, high availability, and strong data security through multi-tier authentication and encryption. The project's main focus was on ensuring functionality, performance, and reliability of all banking modules through effective manual and automation testing practices.

ROLES AND RESPONSIBILITIES:

- Developed and executed automation scripts using **Selenium WebDriver** integrated with the **Cucumber BDD framework** to validate core insurance workflows such as policy creation, claims processing, and premium calculations.
- Implemented the **Page Object Model (POM)** design pattern for enhanced test maintainability and scalability across multiple insurance modules.
- Configured and triggered **CI/CD pipelines** in **Jenkins** using POM.xml to automate regression suite execution and generate detailed test reports after each build. Utilized **GitHub** for version control to manage automation scripts and ensure collaborative development and code synchronization among QA teams.
- Authored and maintained **Cucumber feature files** with business-readable **Gherkin scenarios** covering end-to-end insurance use cases including underwriting and claim adjudication.
- Reviewed and analyzed **Cucumber test reports** to ensure accuracy of automation results and quick identification of defects.
- Conducted both **Manual and Automation Testing** in an **Agile environment**, participating in daily stand-ups, sprint reviews, and planning meetings to align with business requirements. Performed **regression and functional testing** on multiple builds using **Maven, GitHub, and Jenkins** to ensure system stability during policy renewal and claims updates.

Project 2:

Project Title: Horizon Health Care Systems (April 2020 – October 2021)

Domain: Healthcare

Role: Automation Test Engineer

Tools & Technologies: Selenium WebDriver, TestNG, Java, Maven, Jenkins, GitHub, JIRA, Agile
Methodology

Project Description:

Horizon Health Care Systems is a web-based healthcare management platform designed to automate and streamline key processes such as patient registration, appointment scheduling, medical record management, billing, and claims processing. The application provides a unified system for healthcare providers, insurance partners, and patients to ensure efficient care coordination, reduced manual errors, and faster claim settlements. The project focuses on maintaining data accuracy, HIPAA compliance, and end-to-end system reliability through automated testing.

ROLES AND RESPONSIBILITIES:

- Designed and developed **Web** automation test scripts using **Selenium** with **TestNG** for healthcare modules like patient management, claims adjudication, and billing workflows.
- Implemented **Data-Driven** and Modular Frameworks to enhance test coverage and maintainability.
- Configured **Maven** for project build management and executed automated test suites efficiently.
- Integrated automation scripts with **Jenkins CI/CD pipelines** to perform scheduled test executions and generate detailed reports.
- Utilized **GitHub** for version control and collaborative test script management.
- Conducted **Functional**, **Regression**, and **Integration** Testing to validate application stability across multiple environments.
- Authored **TestNG** annotations for **parallel execution** and effective test grouping to optimize execution time.
- Logged and tracked defects in **JIRA**, collaborating with developers and business analysts for resolution.
- Participated in Agile ceremonies including **sprint planning**, **daily stand-ups**, and **retrospective** meetings to ensure quality deliverables.
- Reviewed and validated test reports and logs to identify **root causes of failures** and ensure continuous test improvement.

Project 3 :

Client: USAA - United Services Automobile Association (Feb 2018 – April 2020)

Role: Manual Tester

Domain: Insurance

Technologies: Manual Testing

Project Description:

USAA proudly serves millions of military members and their families with competitive rates on insurance, banking and investment services.

ROLES AND RESPONSIBILITIES:

- Analyzed insurance, banking, and investment service applications to understand business requirements and functional workflows.
- Prepared detailed manual test cases and test scenarios based on requirement documents and user stories.
- Executed functional, regression, integration, and UAT testing to ensure all features meet business and technical requirements.
- Verified workflows related to policy management, customer enrollment, premium payments, renewals, and claims processing.
- Logged, tracked, and managed defects in the bug tracking tool (e.g., JIRA) and collaborated with development teams for timely resolution.

Company: NTT Data Global Services - April 2017 to Feb 2018

Project 1:

Client: WellCare (April 2017 – Feb 2018)

Role: Manual Tester

Domain: HealthCare

Technologies: Manual Testing

Project Description:

WellCare Insurance is a comprehensive web-based insurance management application designed to handle the complete policy lifecycle — from policy creation and customer enrollment to premium payments, renewals, and claims processing. The platform enables agents, underwriters, and customers to manage insurance plans efficiently while ensuring regulatory compliance and data accuracy.

ROLES AND RESPONSIBILITIES:

- Analyzed **business and functional requirements** to design detailed **test scenarios and test cases** for various modules such as Policy Management, Customer Enrollment, and Claims Processing.
- Performed **Functional, Integration, Regression, and User Acceptance Testing (UAT)** to validate end-to-end insurance workflows. Executed **manual test cases** across multiple test cycles and environments to ensure system stability.
- Logged and tracked defects using **JIRA**, worked closely with developers to ensure timely resolution and retesting of defects.
- Participated in **requirement review meetings, daily stand-ups, and sprint planning sessions** in an Agile environment.
- Prepared and maintained **test data**, verified policy details, premium calculations, and claim adjudication workflows.
- Conducted **smoke and sanity testing** after each deployment to ensure application readiness.
- Created **test summary reports** and documented results for stakeholder review and sign-off.

DECLARATION

- I hereby declare that the above information furnished is true to the best of my knowledge.
