64% in 2020

PROJECT

Music Recommendation system using machine learning. (Duration February 2025 - April 2025) Developed a machine learning-based Music Recommendation System as part of an academic project. The system analyzes user preferences and listening history to suggest personalized music recommendations. Implemented techniques such as content-based filtering, collaborative filtering, and hybrid models using HTML, CSS, Key features include: Audio feature extraction using Spotify API or audio analysis tools Data preprocessing and similarity computation Model evaluation using precision, recall, and F1 score User interface prototype for showcasing recommendations Technologies Used: HTML,CSS, Python. Outcome: Successfully demonstrated the system’s capability to deliver personalized music suggestions based on user preferences
